MIP 4 Water Flow

May 13, 2024

1 Introduction

E: the set of edges

T: the set of time periods

 $X_{e,t}$: the amount of water flow from at edge e at time t $Y_{A,t}$: the amount of released water at node A at time t

 Z_{AB} : 1 if pipe from A to B is used, 0 otherwise

 $f(t) = max(-t^3 + 4t^2 - t + 4, 0)$, for $t \ge 0$, 0 otherwise: the amount of water entering the system at node A at time t

 c_e : the capacity of edge e

k: the maximum number of active pipes allowed

Please note that 1. $X_{e,0}$ refers to the initial state of edge e which is always equal to 0 for all edges.

$$\operatorname{Maximize} \sum_{t \in T} X_{EG,t} + X_{FG,t}$$
 Subject to:
$$X_{AB,t} + X_{AC,t} + Y_{A,t} = f(t-1), \qquad \forall t \in T$$

$$X_{BC,t} + X_{BD,t} X_{BE,t} + Y_{B,t} = X_{AB,t-1} + X_{FB,t-1}, \qquad \forall t \in T$$

$$X_{CE,t} + X_{CF,t} + Y_{C,t} = X_{AC,t-1} + X_{BC,t-1}, \qquad \forall t \in T$$

$$X_{DE,t} + Y_{D,t} = X_{BD,t-1}, \qquad \forall t \in T$$

$$X_{EG,t} + Y_{E,t} = X_{DE,t-1} + X_{CE,t-1}, \qquad \forall t \in T$$

$$X_{FG,t} + Y_{F,t} = X_{CE,t-1}, \qquad \forall t \in T$$

$$X_{e,-1} = 0, \qquad \forall e \in E$$

$$X_{e,t} \leq Z_{e}c_{e}, \qquad \forall e \in E$$

$$\sum_{e \in E} Z_{e} \leq k$$

$$X_{e,t} \in R^{+}, \qquad \forall e \in E, t \in T$$

$$Y_{n,t} \in R^{+}, \qquad \forall n \in N, t \in T$$

 $Z_e \in \{0, 1\},$

 $\forall e \in E$
